Note (i)  $I^{\ominus}$  is good leaving Group & as well as good Nucleophile.  
 hence can be used as a Nucleophilic Catalyst in  $S_N$  Rxns.

$\boxed{\gamma_2 > \gamma_1}$  Explain why?

(ii) Use of  $\text{Ag}^+$ ,  $\text{Hg}^{2+}$  favours  $\text{SN}^1 \text{ Rxn}$  due to fast Rate of dissociation due to ppt formation.

(iii) Bond dissociation of a Bond is

(iv) In Case of Miscible Solvents

(Ex)

$$(*) \quad \gamma_{\text{SN}^2} = K_{\text{SN}^2} [\text{R-X}] [\text{Nu}^\ominus]$$

$$(*) \quad \gamma_{\text{SN}^1} = K_{\text{SN}^1} [\text{R-X}]$$

$$(*) \quad \gamma = \gamma_{\text{SN}^1} + \gamma_{\text{SN}^2} = [\text{R-X}] \{ K_{\text{SN}^1} + K_{\text{SN}^2} [\text{Nu}^\ominus] \}$$

$$\% [\text{Product}]_{\text{SN}^2} = \frac{\gamma_{\text{SN}^2}}{\gamma} \times 100 = \frac{K_{\text{SN}^2} [\text{R-X}] [\text{Nu}^\ominus] \times 100}{[\text{R-X}] \{ K_{\text{SN}^1} + K_{\text{SN}^2} [\text{Nu}^\ominus] \}} = \frac{K_{\text{SN}^2} [\text{Nu}^\ominus] \times 100}{K_{\text{SN}^1} + K_{\text{SN}^2} [\text{Nu}^\ominus]}$$

$$\Rightarrow \%[\text{Product}]_{\text{SN}^1} = \frac{\gamma_{\text{SN}^1} \times 100}{\gamma}$$

$$= \frac{K_{\text{SN}^1}}{K_{\text{SN}^1} + K_{\text{SN}^2}[\text{Nu}^-]} \times 100$$

(#) In case of Immiscible Solvents:

A alkyl halide (soluble in NPS) is taken with Aq. NaOH, Explain about the process.

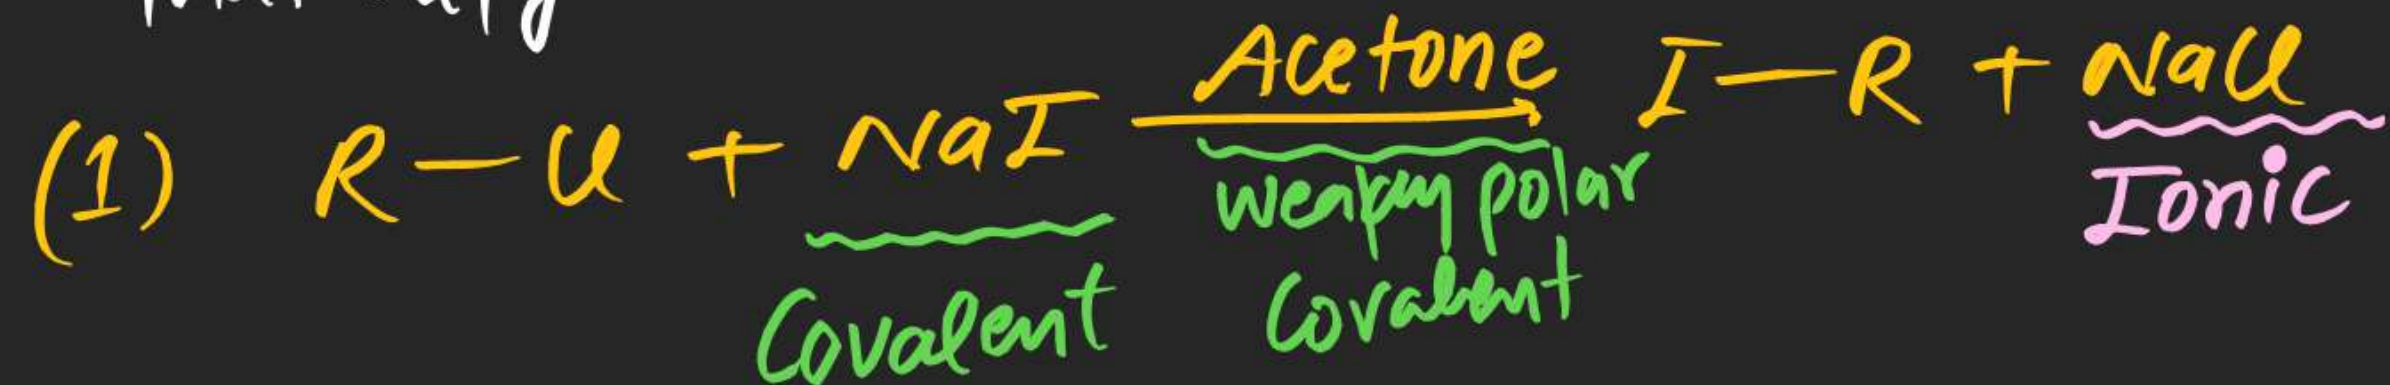

In Such Type of Cases we use phase Transfer Catalyst (PTC)

## (#) Finkelstein Rxn:-

⇒ In this Reaction substrate is Treated with NaI in Acetone so that alkyl Iodide is obtained as a product.

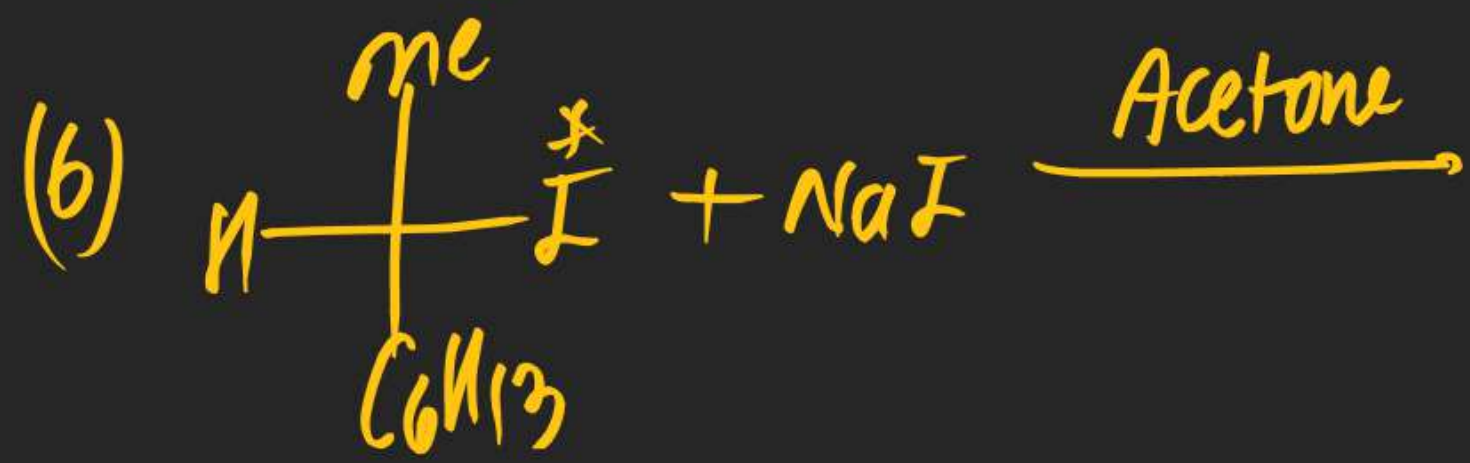

Note: ① Driving force of Reaction is ppt formation of NaU (Ionic) in Acetone (Covalent).

②  $S_N2$  mech<sup>n</sup>

③ Inversion takes place

(2) Swartz Rxn!

⇒ In this Reaction Alkyl halide is Treated with

$\text{AgF}$ ,  $\text{Hg}_2\text{F}_2$ ,  $\text{CoF}_2$  --- so that alkyl fluoride is obtained as a product.

## (#) Williamson Ether Synthesis:

$\Rightarrow$  In this Reaction alkyl halide is treated with Sodium or Potassium alkoxide so that Ether is obtained as a Product.

Note (i)  $S_N2$  mechanism.
