

(iii) rate exp.

$$r = k \left[\text{Acetone} \right]^1 \left[\text{Cl}_2 \right]^0$$

$$\Rightarrow r = k[\text{Acetone}]$$

(iv) rate of halogenation

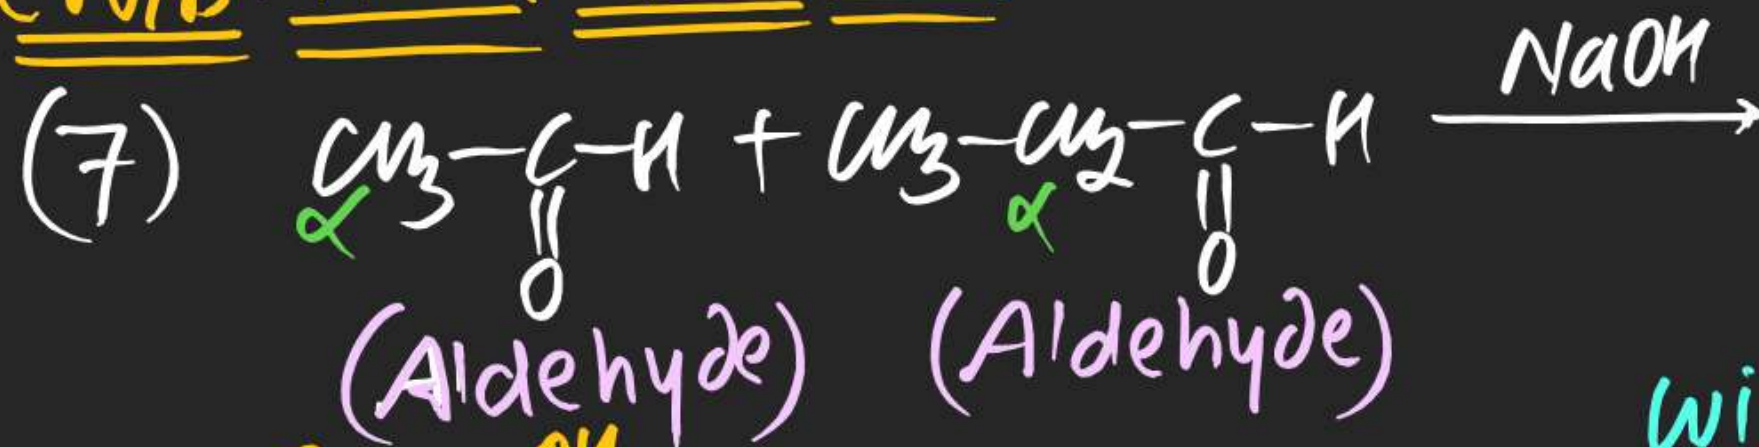

(6)

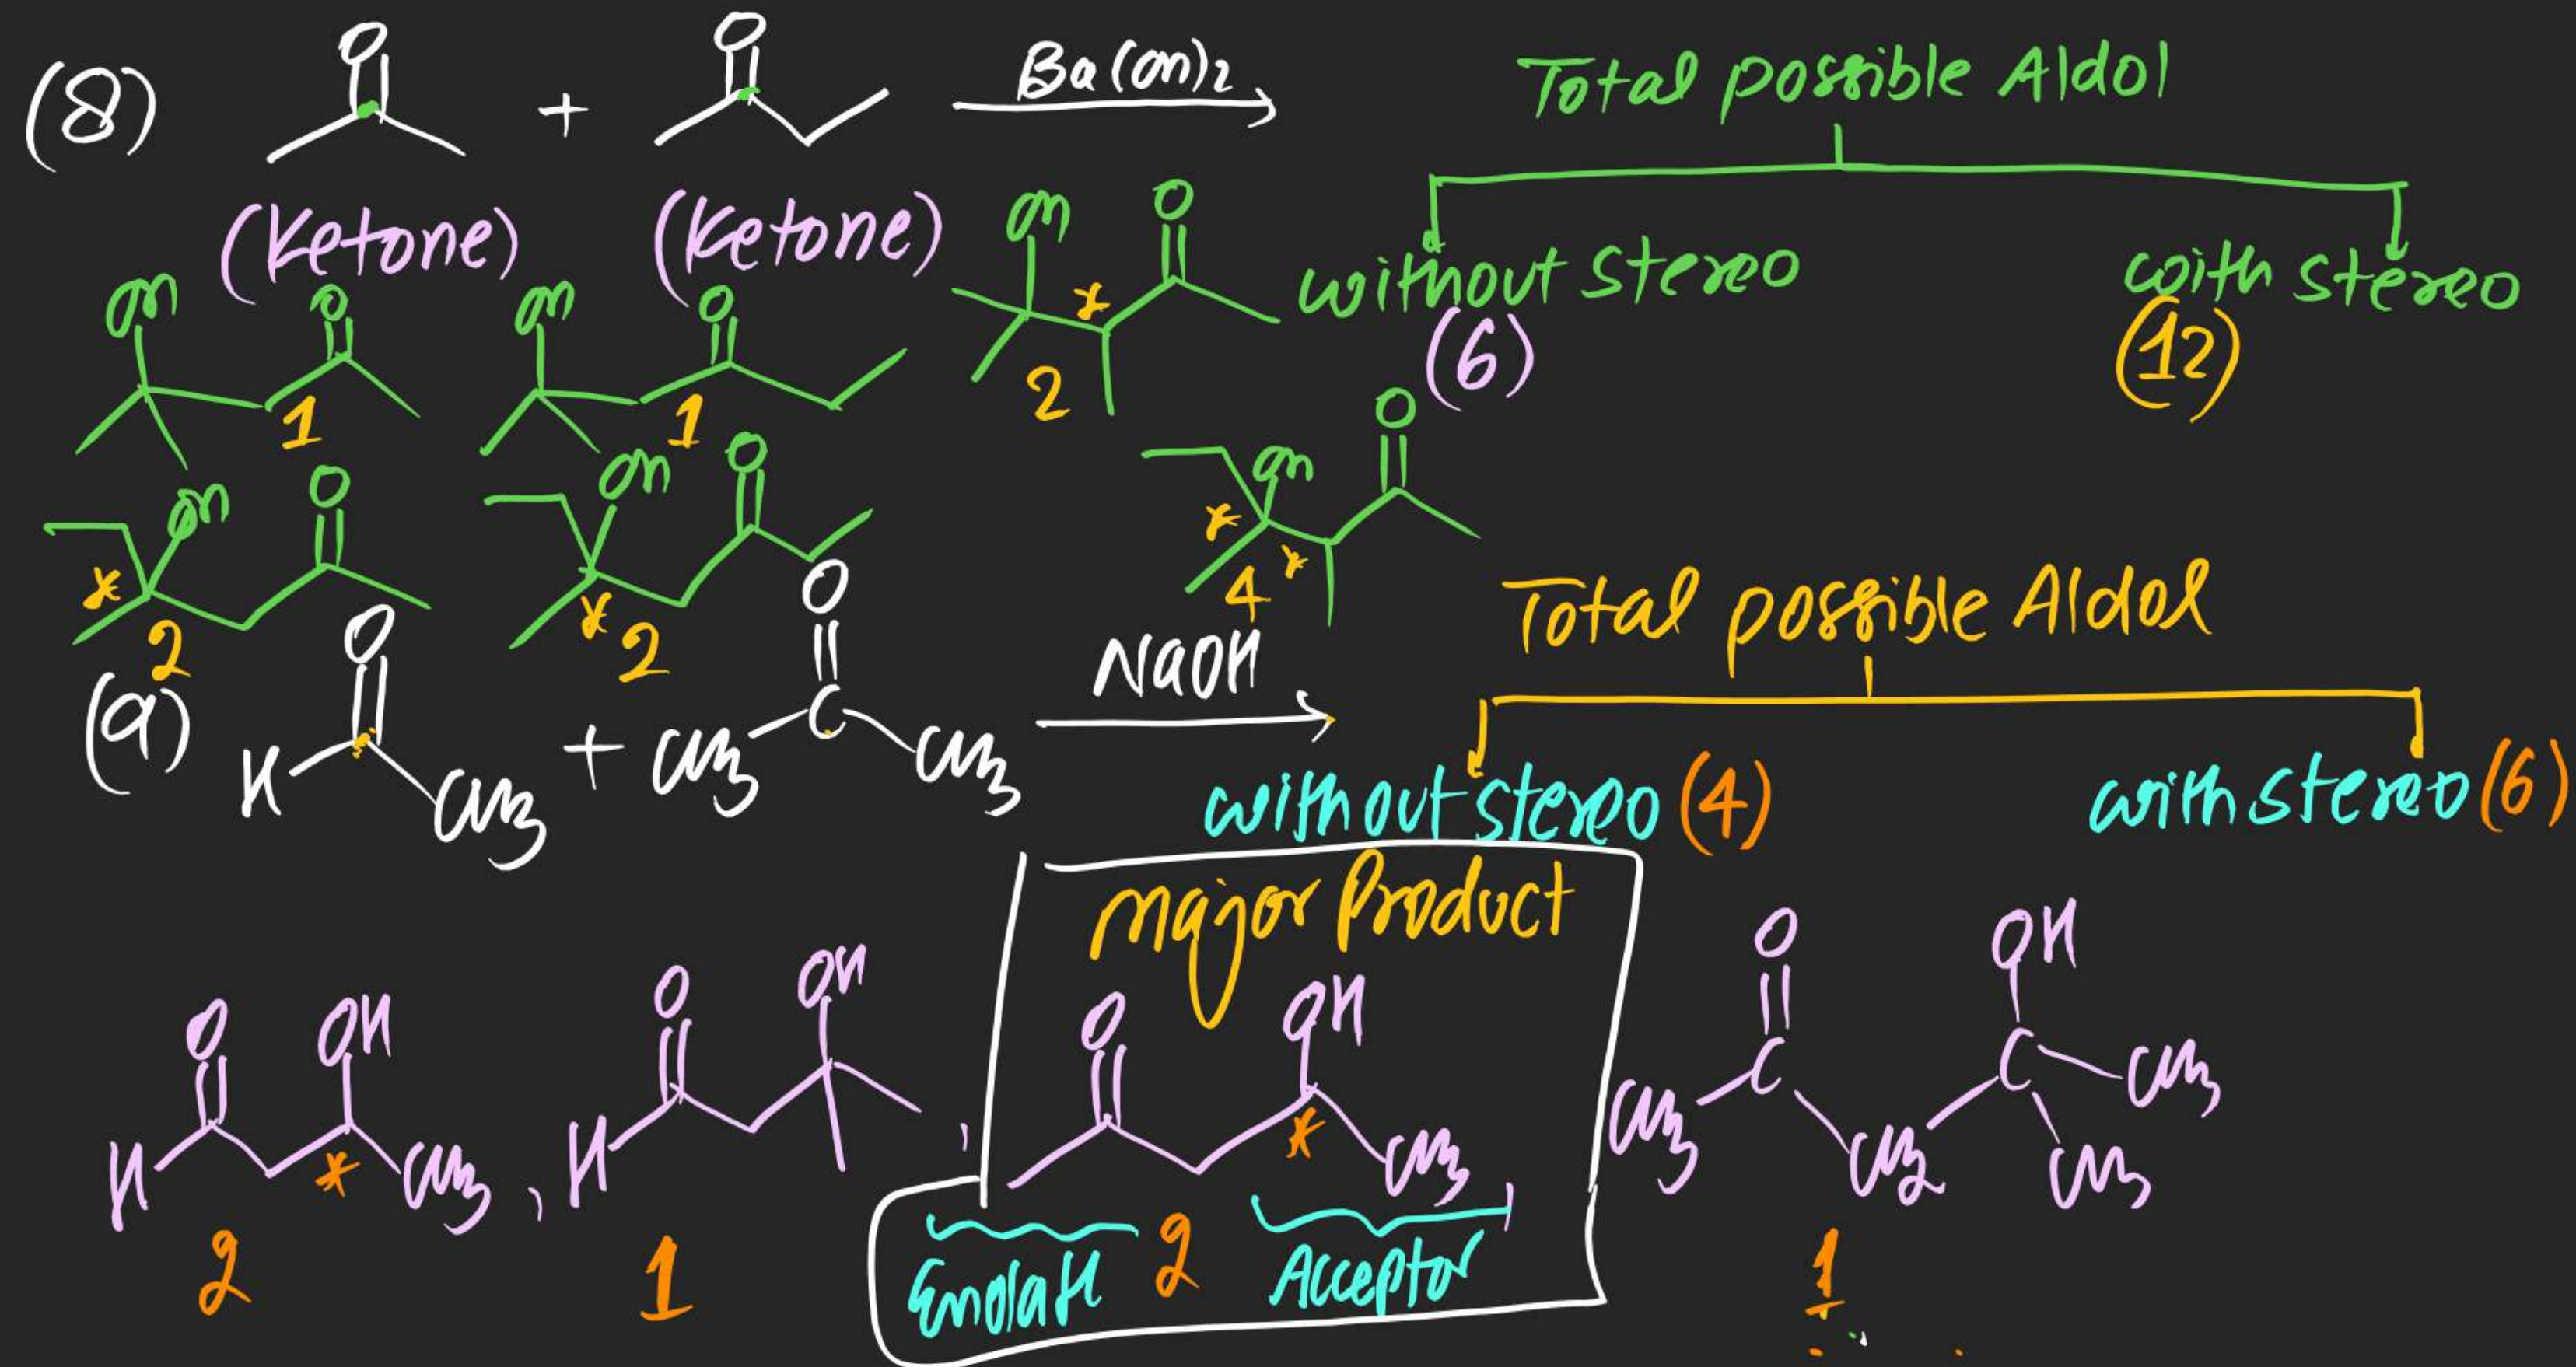

Cross Aldol Reaction:

Total possible Aldol

without
Stereoisomerism
(4)

with Stereo-
Isomerism
(12)

Claisen Reaction:Nitro Aldol:-Cyano Aldol

Intramolecular Aldol:

⇒ di Carbonyl compound may undergo Intramolecular Aldol only when 5 or 6 membered ring is formed

(16)

(17)

(18)

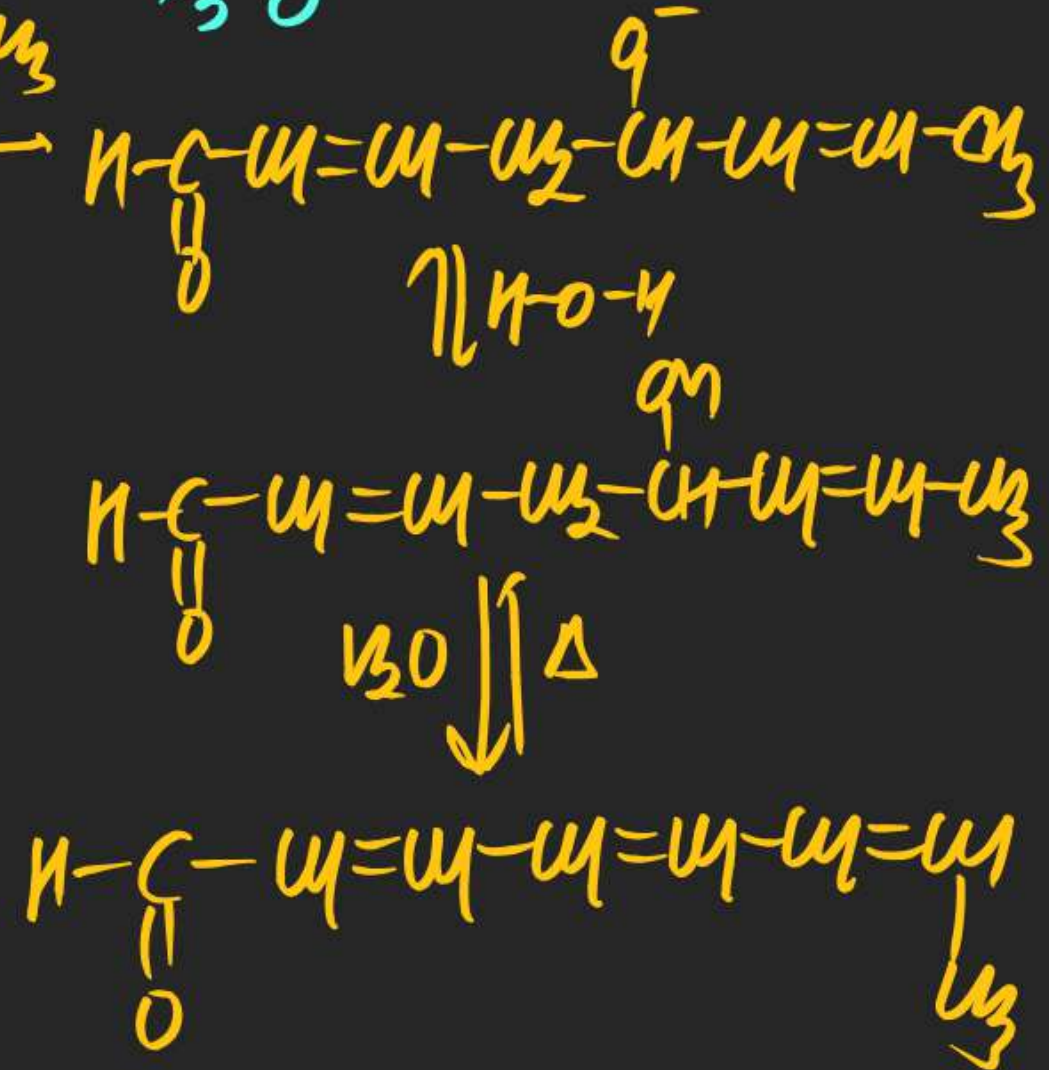

(19)

(20)

(24)

Solⁿ!

(25)

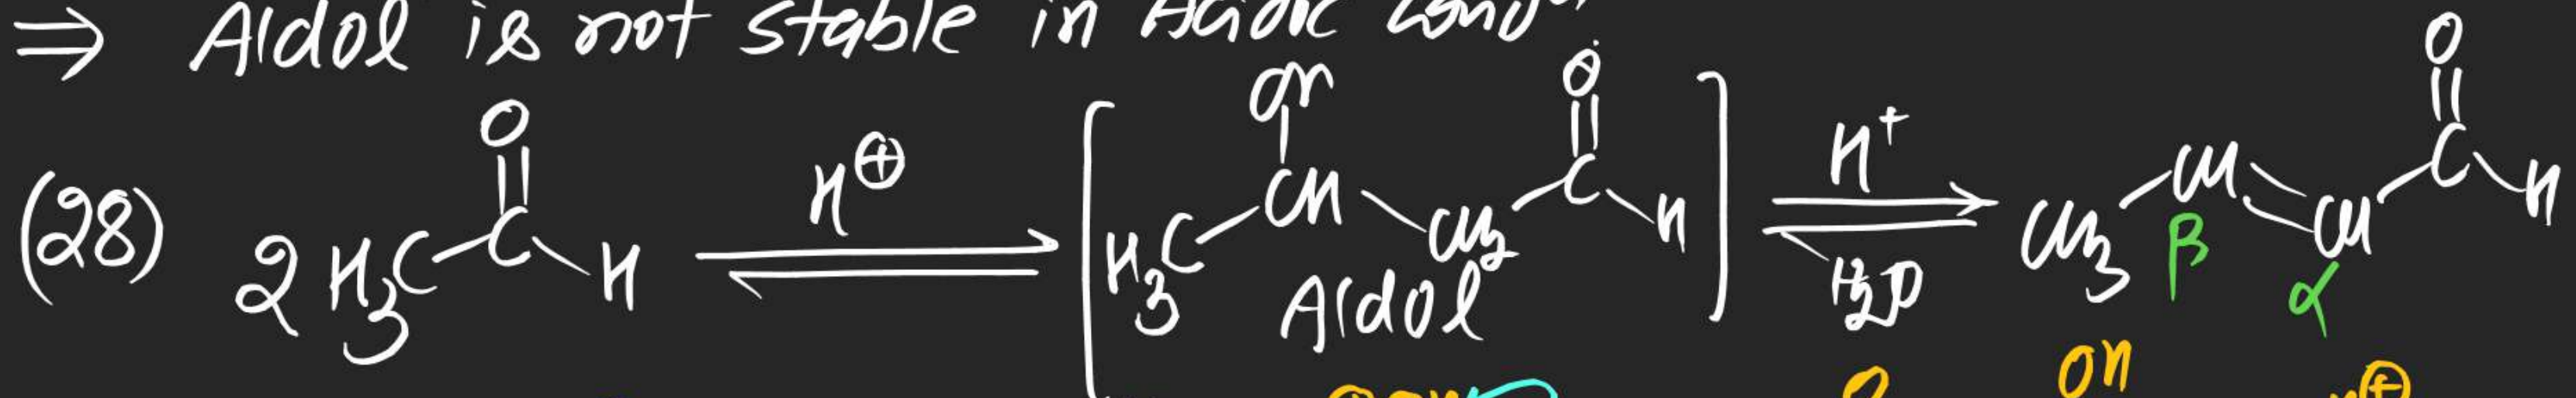

(#) Retro Aldol!

(#) Acid-Catalysed Aldol:

\Rightarrow Carbonyl compound in Acid Catalysed condⁿ gives dehydrated Aldol

\Rightarrow Aldol is not stable in Acidic condⁿ

mechⁿ:

Note (i) Aldol dehydration takes place By E^1 mechanism in Acid Catalysed Condition.

Nishant Jindal
M.O. Jindal
(31)
Q

(x) 1,3,5-Tri methyl Benzene
(Mesitylene)

(Hexa methyl Benzene)

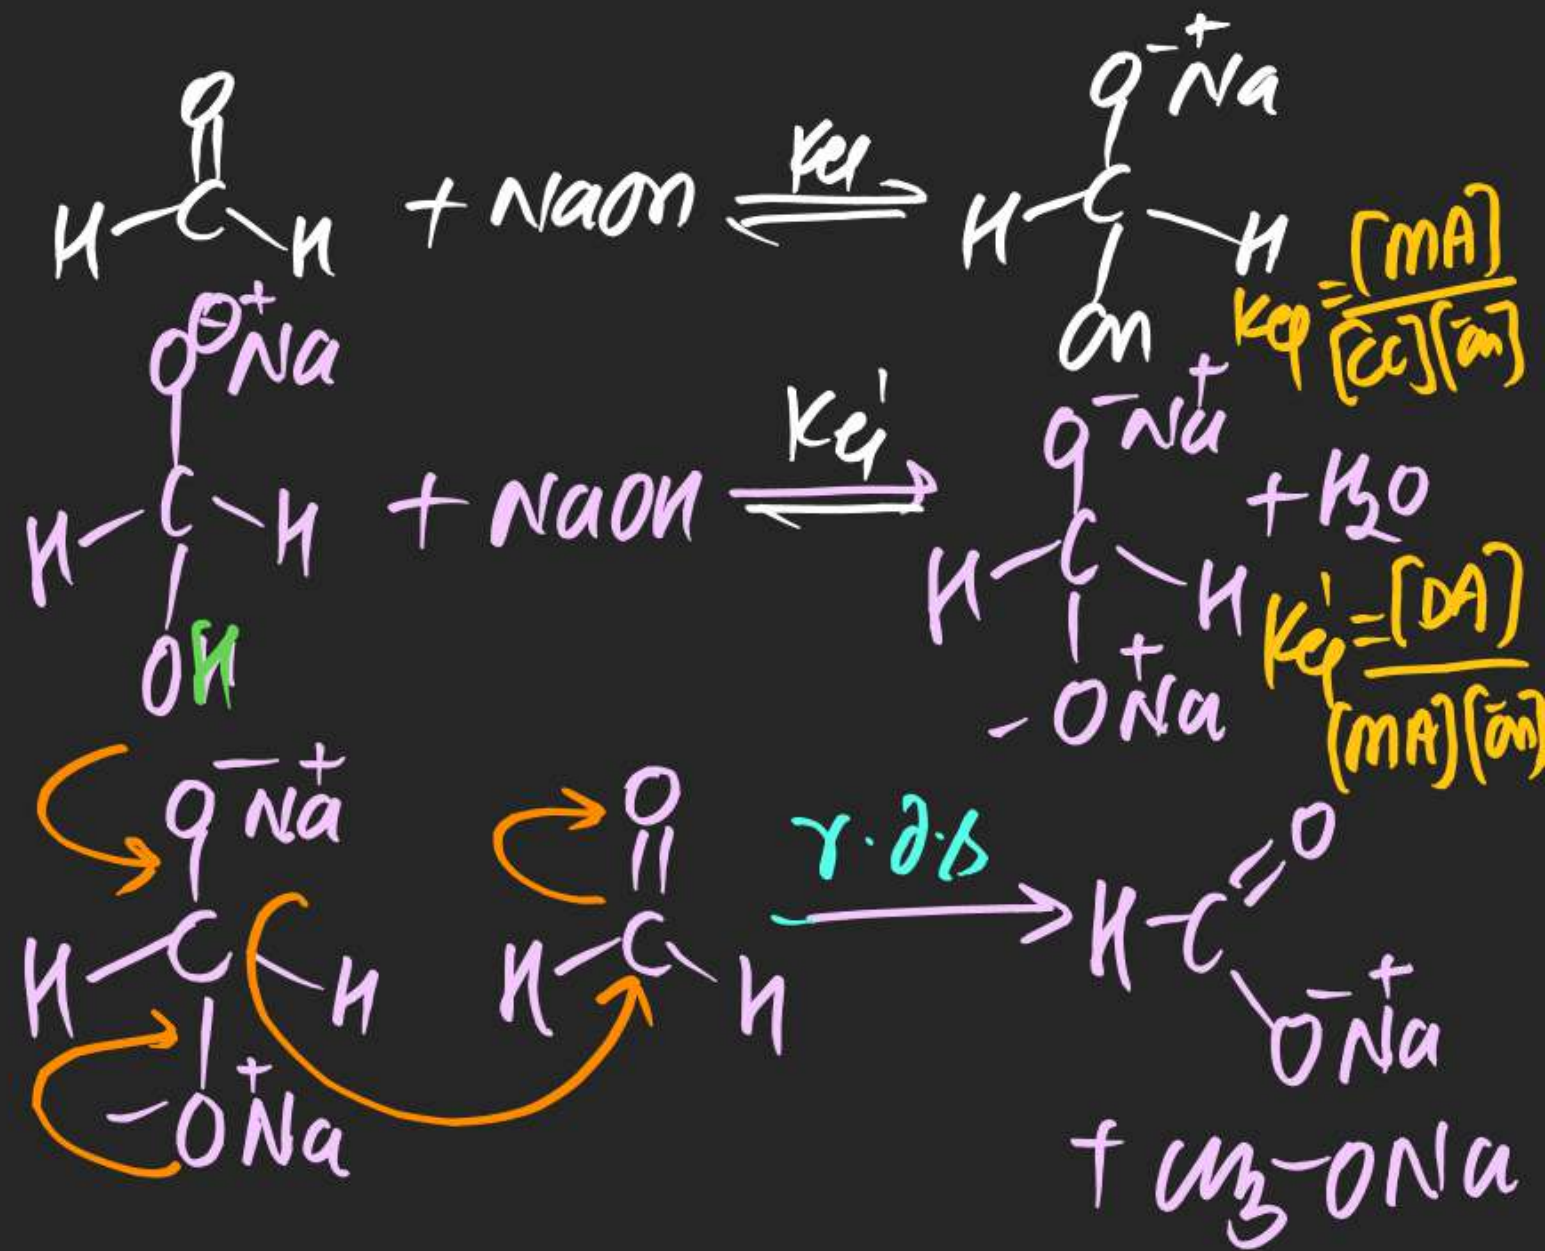

(#) Cannizzaro's Reaction:

⇒ This Reaction is shown By Carbonyl compound without "α" H

⇒ In this Reaction Carbonyl compound without "α" H gets disproportionate / oxidised & reduced in 50% conc NaOH or KOH solution

mechⁿNote (i) Redox Rxⁿ(ii) Self Cannizzaro Rxⁿ is Disproportionation(iii) Migration of hydride ion is r.d.s

(i) rate exp

Excess Base Conc.

$$\begin{aligned}
 r &= k[CC][m.A] \\
 &= k'[CC][CC][\bar{O}n] \\
 &= k'[CC]^2[\bar{O}n]
 \end{aligned}$$

 \Rightarrow Bimolecular \Rightarrow III-order \Rightarrow Kinetic isotopic effect present \Rightarrow Cross Cannizzaro & intramolecular Cannizzaro Both are Redox But not disproportionation

$$\begin{aligned}
 r &= k[DA][CC] \\
 &= k'[mA][\bar{O}H][CC] \\
 &= k''[CC][\bar{O}n][\bar{O}n][CC] \\
 &= k''[CC]^2[\bar{O}n]^2
 \end{aligned}$$

 \Rightarrow Bimolecular \Rightarrow IV-order

(#) Cross Cannizzaro's Rxn:-

most \Rightarrow Acid
Electrophilic

less \Rightarrow Alcohol
electrophilic

Intramolecular Cannizzaro's Rxn:

(#) Perkin Reaction:-

HydroCarbon

$$\Rightarrow \begin{array}{ll} \text{Alkane} & C_n H_{2n+2} \\ \text{Alkene} & C_n H_{2n} \\ \text{Alkyne} & C_n H_{2n-2} \end{array}$$

\Rightarrow Alkane is least Reactive due to having absence of any Reactive functional group.

(#) Method of Preparation!

(1) By Hydrolysis of metallic Carbide!

metallic Carbides on hydrolysis give HydroCarbon as a product.

(#) Wittig Reaction:

⇒ In this Reaction Carbonyl Compound gives alkene as a product or Reaction with phosphorus ylide.

mechⁿ!
