

DPP - 2

- Q.1** An arbitrary shaped closed coil is made of a wire of length  $L$  and a current  $I$  ampere is flowing in it. If the plane of the coil is perpendicular to magnetic field  $\vec{B}$ , the force on the coil is  $k^2 - 1$ . Value of  $K$  is equal to
- Q.2** An elastic circular wire of length  $l$  carries a current  $I$ . It is placed in a uniform magnetic field  $\vec{B}$  (out of paper) such that its plane is perpendicular to the direction of  $\vec{B}$ . the tension in string is  $(9IRB)/(\alpha+2)$ . Value of  $\alpha^2$  is

- Q.3** A current-carrying wire  $LN$  is bent in the form as shown below. If wire carries a current of  $10\text{ A}$  and it is placed in a magnetic field of  $5\text{ T}$  which acts perpendicular to the paper outwards then it will experience a force of \_\_\_\_N.

- Q.4** A wire carrying current  $i$  is placed in a uniform magnetic field in the form of the curve  $y = a \sin\left(\frac{\pi x}{L}\right)$   $0 \leq x \leq 2L$ . The force acting on the wire is

- (a)  $\frac{iBL}{\pi}$                       (b)  $iBL\pi$                       (c)  $2iBL$                       (d) Zero
- Q.5** Same current  $i = 2\text{ A}$  is flowing in a wire frame as shown in the figure. The frame is a combination of two equilateral triangles  $ACD$  and  $CDE$  of side  $1\text{ m}$ . It is placed in uniform magnetic field  $B = 4\text{ T}$  acting perpendicular to the plane of frame. The magnitude of magnetic force acting on the frame is

- (a) 24 N                      (b) zero                      (c) 16 N                      (d) 8 N

**Q.6** A parabolic wire as shown in the figure is located in  $x - y$  plane and carries a current  $I = 10$  A. A uniform magnetic field of intensity  $2\sqrt{2}$  T, making an angle of  $45^\circ$  with  $x$ -axis exists throughout the plane. If the coordinates of end point 'P' of wire are (2 m, 1.5 m), then the total force acting on the wire is

- (a)  $40\hat{N}\hat{k}$                       (b)  $10\hat{N}\hat{k}$                       (c)  $-10\hat{N}\hat{k}$                       (d)  $-40\hat{N}\hat{k}$

**Q.7** A wire carrying a current of 4 A is bent in the form of a parabola  $x^2 + y = 16$  as shown in figure, where  $x$  and  $y$  are in meter. The wire is placed in a uniform magnetic field  $\vec{B} = 5\hat{k}$  T. The force acting on the wire is

- (a)  $80\hat{j}$  N                      (b)  $-80\hat{j}$  N                      (c)  $-160\hat{j}$  N                      (d)  $160\hat{j}$  N

**Q.9** A semi-circular current-carrying wire having radius  $R$  is placed in  $x - y$  plane with its centre at origin 'O'. There is non-uniform magnetic field  $\vec{B} = \frac{B_0 x}{2R} \hat{k}$  (here  $B_0$  is +ve constant) is existing in the region. The magnetic force acting on semi-circular wire will be along

- (a)  $-x$ -axis                      (b)  $+y$ -axis                      (c)  $-y$ -axis                      (d)  $+x$ -axis

(Physics)

MAGNETISM

- Q.9** A conducting wire bent in the form of a parabola  $y^2 = 2x$  carries a current  $i = 2$  A as shown in figure. This wire is placed in a uniform magnetic field  $\vec{B} = -4\hat{k}$  T. The magnetic force on the wire is (in newton)

- (a)  $-16\hat{i}$                       (b)  $32\hat{i}$                       (c)  $-32\hat{i}$                       (d)  $16\hat{i}$
- Q.10** A cylindrical rod of mass  $m$ , radius  $r$  and length  $L$  rests on two rails (see figure). A uniform magnetic field  $B$  acts vertically downwards. The rod carries a current  $i$  and can roll along the rails without slipping. If the rod starts from rest, calculate its linear speed as a function of its linear displacement  $x$ .

- (a)  $v = \left[ \frac{4BiLx}{3m} \right]^{1/2}$                       (b)  $v = \left[ \frac{4BiLx}{m} \right]^{1/2}$
- (c)  $v = \left[ \frac{BiLx}{3m} \right]^{1/2}$                       (d)  $v = \left[ \frac{BiLx}{m} \right]^{1/2}$
- Q.10** A circular current loop of radius  $a$  is placed in a radial field  $B$  as shown. The net force acting on the loop is

- (a) zero                      (b)  $2\pi BaI \cos \theta$
- (c)  $2\pi aIB \sin \theta$                       (d) None
